Product TypePurified Rabbit Anti human PolyClonal AntibodyImmunogen SpeciesHomo sapiens (Human)Target NamesKLK1Target DetailsKallikreins are a subgroup of serine proteases having diverse physiologic functions. Growing evidence suggests that many kallikreins are implicate carcinogenesis and some have potential as novel cancer and other disea biomarkers. This gene is one of the fifteen kallikrein subfamily members I in a cluster on chromosome 19. This protein is functionally conserved in i capacity to release the vasoactive peptide, Lys-bradykinin, from low mole	Isotype	IgG
Immunogen SpeciesHomo sapiens (Human)Target NamesKLK1Target DetailsKallikreins are a subgroup of serine proteases having diverse physiologic functions. Growing evidence suggests that many kallikreins are implicate carcinogenesis and some have potential as novel cancer and other disea biomarkers. This gene is one of the fifteen kallikrein subfamily members I in a cluster on chromosome 19. This protein is functionally conserved in i capacity to release the vasoactive peptide, Lys-bradykinin, from low mole	Alias	kallikrein 1;KLK1;KLKR;Klk6;hK1 ;
Target Names KLK1 Target Details Kallikreins are a subgroup of serine proteases having diverse physiologic functions. Growing evidence suggests that many kallikreins are implicate carcinogenesis and some have potential as novel cancer and other disea biomarkers. This gene is one of the fifteen kallikrein subfamily members I in a cluster on chromosome 19. This protein is functionally conserved in i capacity to release the vasoactive peptide, Lys-bradykinin, from low mole	Product Type	Purified Rabbit Anti human PolyClonal Antibody
Target DetailsKallikreins are a subgroup of serine proteases having diverse physiologic functions. Growing evidence suggests that many kallikreins are implicate carcinogenesis and some have potential as novel cancer and other disea biomarkers. This gene is one of the fifteen kallikrein subfamily members I in a cluster on chromosome 19. This protein is functionally conserved in i capacity to release the vasoactive peptide, Lys-bradykinin, from low mole	Immunogen Species	Homo sapiens (Human)
functions. Growing evidence suggests that many kallikreins are implicate carcinogenesis and some have potential as novel cancer and other disea biomarkers. This gene is one of the fifteen kallikrein subfamily members in a cluster on chromosome 19. This protein is functionally conserved in i capacity to release the vasoactive peptide, Lys-bradykinin, from low mole	Target Names	KLK1
	Target Details	Kallikreins are a subgroup of serine proteases having diverse physiological functions. Growing evidence suggests that many kallikreins are implicated in carcinogenesis and some have potential as novel cancer and other disease biomarkers. This gene is one of the fifteen kallikrein subfamily members located in a cluster on chromosome 19. This protein is functionally conserved in its capacity to release the vasoactive peptide, Lys-bradykinin, from low molecular weight kininogen.
