Relevance	<p>Receptor for TNFSF6/FASLG. The adapter molecule FADD recruits caspase-8 to the activated receptor. The resulting death-inducing signaling complex (DISC) performs caspase-8 proteolytic activation which initiates the subsequent cascade of caspases (aspartate-specific cysteine proteases) mediating apoptosis. FAS-mediated apoptosis may have a role in the induction of peripheral tolerance, in the antigen-stimulated suicide of mature T-cells, or both. The secreted isoforms 2 to 6 block apoptosis (in vitro).</p> <p>Michael J. Pinkoski, Am JPhysiol Gastrointest Liver Physiol, Mar 2000; 278: 354. Morgan Jenkins, J. Immunol., Aug 1999; 163: 1195.
