## CD22 Recombinant Monoclonal Antibody

Product Code	CSB-RA962691A0HU
Storage	Upon receipt, store at -20°C or -80°C. Avoid repeated freeze.
Uniprot No.	P20273
Immunogen	A synthesized peptide derived from human CD22
Species Reactivity	Human
Tested Applications	ELISA, IHC; Recommended dilution: IHC:1:50-1:200
Relevance	<ul> <li>Mediates B-cell B-cell interactions. May be involved in the localization of B-cells in lymphoid tissues. Binds sialylated glycoproteins; one of which is CD45.</li> <li>Preferentially binds to alpha-2,6-linked sialic acid. The sialic acid recognition site can be masked by cis interactions with sialic acids on the same cell surface.</li> <li>Upon ligand induced tyrosine phosphorylation in the immune response seems to be involved in regulation of B-cell antigen receptor signaling. Plays a role in positive regulation through interaction with Src family tyrosine kinases and may also act as an inhibitory receptor by recruiting cytoplasmic phosphorylation of signaling molecules.</li> </ul>
Form	Liquid
Conjugate	Non-conjugated
Storage Buffer	Rabbit IgG in phosphate buffered saline, pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol.
Purification Method	Affinity-chromatography
Isotype	Rabbit IgG
Clonality	Monoclonal
Product Type	Recombinant Antibody
Immunogen Species	Homo sapiens (Human)
Research Area	Cancer; Immunology; Stem cells
Gene Names	CD22
Clone No.	3D8
Image	

Image

IHC image of CSB-RA962691A0HU diluted at 1:100 and staining in paraffin-embedded human tonsil tissue performed on a Leica BondTM system. After dewaxing and hydration, antigen retrieval was mediated by high pressure in a citrate buffer (pH 6.0). Section was blocked with 10% normal goat serum 30min at RT. Then primary antibody (1% BSA) was incubated at 4? overnight. The primary is detected by a Goat anti-rabbit IgG polymer labeled by HRP and visualized using 0.05% DAB.

## Description

CD22, also called Siglec-2, is a receptor predominantly restricted to B cells. On B cells, expression of CD22 is first apparent at the pro-B cell stage of B cell development in the bone marrow, reaching its highest expression, by the mature B cell stage in the periphery. CD22 functions to inhibit BCR signaling and regulate TLR signaling and the survival of B cells. CD22 has been implicated in the regulation of B cell responses to T cell-independent (TI) type 2 antigens (Ags), TLR agonists, and T cell-dependent (TD) Ags. CD22 also plays a role in the migration of recirculating B cells to the bone marrow (BM).

The main production processes of this recombinant CD22 antibody included immunization, B cell harvest, antibody secreting cell enrichment, single cell sequencing, antibody expression and purification. The single B cell screening platform was used for the CD22 antibody gene screening. And this CD22 antibody was tested in ELISA, IHC.
