TINF2 Recombinant Monoclonal Antibody

Product Code	CSB-RA997969A0HU
Storage	Upon receipt, store at -20°C or -80°C. Avoid repeated freeze.
Uniprot No.	Q9BSI4
Immunogen	A synthesized peptide derived from human Tin2
Species Reactivity	Human, Mouse, Rat
Tested Applications	ELISA, WB; Recommended dilution: WB:1:500-1:5000
Relevance	Component of the shelterin complex (telosome) that is involved in the regulation of telomere length and protection. Shelterin associates with arrays of double- stranded TTAGGG repeats added by telomerase and protects chromosome ends; without its protective activity, telomeres are no longer hidden from the DNA damage surveillance and chromosome ends are inappropriately processed by DNA repair pathways. Plays a role in shelterin complex assembly. Isoform 1 may have additional role in tethering telomeres to the nuclear matrix.
Form	Liquid
Conjugate	Non-conjugated
Storage Buffer	Rabbit IgG in phosphate buffered saline, pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol.
Purification Method	Affinity-chromatography
Isotype	Rabbit IgG
Clonality	Monoclonal
Product Type	Recombinant Antibody
Immunogen Species	Homo sapiens (Human)
Research Area	Epigenetics and Nuclear Signaling
Gene Names	TINF2
Clone No.	5G11

Description

TINF2 is the encoding gene for TIN2, which acts as an adaptor crucial for the recruitment, formation, and stabilization of the shelterin complex. It mediates the localization of three key DNA interacting proteins (TRF1, TRF2, and POT1) at telomeres. It is essential for shelterin assembly at the telomere and is an important regulator of telomere length. Mutations in TINF2 cause short-telomere syndromes. Deletion of TIN2 is embryonically lethal, and conditional knockout of TIN2 in mouse embryo fibroblasts (MEFs) leads to growth arrest. Upregulation of TIN2 has been commonly observed in many human malignancies.

The recombinant TINF2 antibody production commenced with the obtaining of genes encoding antibody against TINF2. Antibody genes were obtained by sequencing and screening DNA reversely transcribed from RNA that was extracted from the B cells isolated from immunized animals. These genes were cloned into plasma vectors and subsequently transfected into a mammalian cell line for production. The product is the recombinant TINF2 antibody. It underwent purification using Affinity-chromatography from the cell culture medium. This recombinant TINF2 antibody has been validated to detect the TINF2 protein from Human, Mouse, Rat in the ELISA, WB.
