Target NamesKDM5CTarget DetailsThis gene is a member of the SMCY homolog family and encodes a proone ARID domain, one JmjC domain, one JmjN domain and two PHD-tifingers. The DNA-binding motifs suggest this protein is involved in the of transcription and chromatin remodeling. Mutations in this gene have associated with X-linked mental retardation. Alternative splicing results	Product Type	Purified Rabbit Anti human PolyClonal Antibody
Target DetailsThis gene is a member of the SMCY homolog family and encodes a proone ARID domain, one JmjC domain, one JmjN domain and two PHD-t fingers. The DNA-binding motifs suggest this protein is involved in the of transcription and chromatin remodeling. Mutations in this gene have associated with X-linked mental retardation. Alternative splicing results	Immunogen Species	Homo sapiens (Human)
one ARID domain, one JmjC domain, one JmjN domain and two PHD-t fingers. The DNA-binding motifs suggest this protein is involved in the of transcription and chromatin remodeling. Mutations in this gene have associated with X-linked mental retardation. Alternative splicing results	Target Names	KDM5C
	Target Details	This gene is a member of the SMCY homolog family and encodes a protein with one ARID domain, one JmjC domain, one JmjN domain and two PHD-type zinc fingers. The DNA-binding motifs suggest this protein is involved in the regulation of transcription and chromatin remodeling. Mutations in this gene have been associated with X-linked mental retardation. Alternative splicing results in multiple transcript variants.
