

MYO9B Antibody

Product Code CSB-PA015355GA01HU Storage Upon receipt, store at -20°C or -80°C. Avoid repeated freeze. Uniprot No. Q13459 Immunogen Human MYO9B Raised In Rabbit Species Reactivity Human,Mouse,Rat Tested Applications ELISA,WB Storage Buffer PBS with 0.1% Sodium Azide, 50% Glycerol, pH 7.320°C, Avoid freeze / thaw cycles. Purification Method Antigen Affinity Purified Isotype IgG Alias myosin IXB:MYO9B;CELIAC4;MYR5; Product Type Purified Rabbit Anti human PolyClonal Antibody Immunogen Species Homo sapiens (Human) Target Names MYO9B Target Details This gene encodes a member of the myosin family of actin-based molecular motor heavy chain proteins. The protein has four IQ motifs located in the neck domain that bind calmodulin, which serves as a light chain. The protein complex has a single-headed structure and exhibits processive movement on actin filaments toward the minus-end. The protein also has rho-GTPase activity. Polymorphisms in this gene are associated with celiac disease and ulcerative colitis susceptibility. Multiple transcript variants encoding different isoforms have been found for this gene.		
Uniprot No. Q13459 Immunogen Human MYO9B Raised In Rabbit Species Reactivity Human,Mouse,Rat Tested Applications ELISA,WB Storage Buffer PBS with 0.1% Sodium Azide, 50% Glycerol, pH 7.320°C, Avoid freeze / thaw cycles. Purification Method Antigen Affinity Purified Isotype IgG Alias myosin IXB;MYO9B;CELIAC4;MYR5; Product Type Purified Rabbit Anti human PolyClonal Antibody Immunogen Species Homo sapiens (Human) Target Names MYO9B Target Details This gene encodes a member of the myosin family of actin-based molecular motor heavy chain proteins. The protein has four IQ motifs located in the neck domain that bind calmodulin, which serves as a light chain. The protein complex has a single-headed structure and exhibits processive movement on actin filaments toward the minus-end. The protein also has rho-GTPase activity. Polymorphisms in this gene are associated with celiac disease and ulcerative colitis susceptibility. Multiple transcript variants encoding different isoforms have	Product Code	CSB-PA015355GA01HU
Immunogen Human MYO9B Raised In Rabbit Species Reactivity Human,Mouse,Rat Tested Applications ELISA,WB Storage Buffer PBS with 0.1% Sodium Azide, 50% Glycerol, pH 7.320°C, Avoid freeze / thaw cycles. Polymorphisms in this gene are associated with celiac disease and ulcerative colitis susceptibility. Multiple transcript variants encoding different isoforms have	Species Reactivity	Human, Mouse, Rat
Purification Method Antigen Affinity Purified Isotype IgG Alias myosin IXB;MYO9B;CELIAC4;MYR5; Product Type Purified Rabbit Anti human PolyClonal Antibody Immunogen Species Homo sapiens (Human) Target Names MYO9B Target Details This gene encodes a member of the myosin family of actin-based molecular motor heavy chain proteins. The protein has four IQ motifs located in the neck domain that bind calmodulin, which serves as a light chain. The protein complex has a single-headed structure and exhibits processive movement on actin filaments toward the minus-end. The protein also has rho-GTPase activity. Polymorphisms in this gene are associated with celiac disease and ulcerative colitis susceptibility. Multiple transcript variants encoding different isoforms have	Tested Applications	ELISA,WB
Isotype IgG Alias myosin IXB;MYO9B;CELIAC4;MYR5; Product Type Purified Rabbit Anti human PolyClonal Antibody Immunogen Species Homo sapiens (Human) Target Names MYO9B Target Details This gene encodes a member of the myosin family of actin-based molecular motor heavy chain proteins. The protein has four IQ motifs located in the neck domain that bind calmodulin, which serves as a light chain. The protein complex has a single-headed structure and exhibits processive movement on actin filaments toward the minus-end. The protein also has rho-GTPase activity. Polymorphisms in this gene are associated with celiac disease and ulcerative colitis susceptibility. Multiple transcript variants encoding different isoforms have	Storage Buffer	•
Alias myosin IXB;MYO9B;CELIAC4;MYR5; Product Type Purified Rabbit Anti human PolyClonal Antibody Immunogen Species Homo sapiens (Human) Target Names MYO9B Target Details This gene encodes a member of the myosin family of actin-based molecular motor heavy chain proteins. The protein has four IQ motifs located in the neck domain that bind calmodulin, which serves as a light chain. The protein complex has a single-headed structure and exhibits processive movement on actin filaments toward the minus-end. The protein also has rho-GTPase activity. Polymorphisms in this gene are associated with celiac disease and ulcerative colitis susceptibility. Multiple transcript variants encoding different isoforms have	Purification Method	Antigen Affinity Purified
Product Type Purified Rabbit Anti human PolyClonal Antibody Immunogen Species Homo sapiens (Human) Target Names MYO9B Target Details This gene encodes a member of the myosin family of actin-based molecular motor heavy chain proteins. The protein has four IQ motifs located in the neck domain that bind calmodulin, which serves as a light chain. The protein complex has a single-headed structure and exhibits processive movement on actin filaments toward the minus-end. The protein also has rho-GTPase activity. Polymorphisms in this gene are associated with celiac disease and ulcerative colitis susceptibility. Multiple transcript variants encoding different isoforms have	Isotype	IgG
Immunogen Species Homo sapiens (Human) Target Names MYO9B Target Details This gene encodes a member of the myosin family of actin-based molecular motor heavy chain proteins. The protein has four IQ motifs located in the neck domain that bind calmodulin, which serves as a light chain. The protein complex has a single-headed structure and exhibits processive movement on actin filaments toward the minus-end. The protein also has rho-GTPase activity. Polymorphisms in this gene are associated with celiac disease and ulcerative colitis susceptibility. Multiple transcript variants encoding different isoforms have	Alias	myosin IXB;MYO9B;CELIAC4;MYR5;
Target Names This gene encodes a member of the myosin family of actin-based molecular motor heavy chain proteins. The protein has four IQ motifs located in the neck domain that bind calmodulin, which serves as a light chain. The protein complex has a single-headed structure and exhibits processive movement on actin filaments toward the minus-end. The protein also has rho-GTPase activity. Polymorphisms in this gene are associated with celiac disease and ulcerative colitis susceptibility. Multiple transcript variants encoding different isoforms have	Product Type	Purified Rabbit Anti human PolyClonal Antibody
Target Details This gene encodes a member of the myosin family of actin-based molecular motor heavy chain proteins. The protein has four IQ motifs located in the neck domain that bind calmodulin, which serves as a light chain. The protein complex has a single-headed structure and exhibits processive movement on actin filaments toward the minus-end. The protein also has rho-GTPase activity. Polymorphisms in this gene are associated with celiac disease and ulcerative colitis susceptibility. Multiple transcript variants encoding different isoforms have	Immunogen Species	Homo sapiens (Human)
motor heavy chain proteins. The protein has four IQ motifs located in the neck domain that bind calmodulin, which serves as a light chain. The protein complex has a single-headed structure and exhibits processive movement on actin filaments toward the minus-end. The protein also has rho-GTPase activity. Polymorphisms in this gene are associated with celiac disease and ulcerative colitis susceptibility. Multiple transcript variants encoding different isoforms have	Target Names	MYO9B
	Target Details	motor heavy chain proteins. The protein has four IQ motifs located in the neck domain that bind calmodulin, which serves as a light chain. The protein complex has a single-headed structure and exhibits processive movement on actin filaments toward the minus-end. The protein also has rho-GTPase activity. Polymorphisms in this gene are associated with celiac disease and ulcerative colitis susceptibility. Multiple transcript variants encoding different isoforms have
