Immunogen Species	Homo sapiens (Human)
Target Names	NME2
Target Details	Nucleoside diphosphate kinase (NDK) exists as a hexamer composed of A (encoded by NME1) and B (encoded by this gene) isoforms. Multiple alternatively spliced transcript variants encoding the same isoform have been found for this gene. Co-transcription of this gene and the neighboring upstream gene (NME1) generates naturally-occurring transcripts (NME1-NME2) which encode a fusion protein comprised of sequence sharing identity with each individual gene product.
