processing enzyme in the endoplasmic reticulum (ER). This prophospho-protein known to be a substrate for protein kinase C. I	Target Details	This gene encodes the beta-subunit of glucosidase II, an N-linked glycan- processing enzyme in the endoplasmic reticulum (ER). This protein is an acidic phospho-protein known to be a substrate for protein kinase C. Mutations in this gene have been associated with the autosomal dominant polycystic liver disease (PCLD). Alternatively spliced transcript variants encoding distinct
