Target Details	The intronless gene for this transcription coactivator is located between the protocadherin beta and gamma gene clusters on chromosome 5. This protein is a component of the TFIID protein complex, a complex which binds to the TATA box in class II promoters and recruits RNA polymerase II and other factors. This particular subunit interacts with the largest TFIID subunit, as well as multiple transcription activators. The protein is required for transcription by promoters targeted by RNA polymerase II.
