Source	Baculovirus
Target Names	Ercc3
Protein Names	Recommended name: TFIIH basal transcription factor complex helicase XPB subunit EC= 3.6.4.12 Alternative name(s): DNA excision repair protein ERCC-3
Expression Region	1-782
Notes	Repeated freezing and thawing is not recommended. Store working aliquots at 4°C for up to one week.
Tag Info	Tag type will be determined during the manufacturing process.
Protein Length	full length protein
Target Details	ERCC3 is an ATP-dependent DNA helicase that functions in nucleotide excision repair and complements xeroderma pigmentosum group B mutations. It also is

the 89 kDa subunit of basal transcription factor 2 (TFIIH) and thus functions in class II transcription.

Reconstitution

We recommend that this vial be briefly centrifuged prior to opening to bring the contents to the bottom. Please reconstitute protein in deionized sterile water to a concentration of 0.1-1.0 mg/mL. We recommend to add 5-50% of glycerol (final concentration) and aliquot for long-term storage at -20°C/-80°C. Our default final concentration of glycerol is 50%. Customers could use it as reference.
